Question **1**

Correct

Marked out of 3.00

Flag question

Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false. Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1 false Sample Input 2 27 77 Sample Output 2 true

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main()
{
    int x,y;
    scanf("%d %d",&x,&y);
    if(x%10==y%10)
    {
        printf("true");
    }
    else
    {
        printf("false");
    }

}
```

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Passed all tests! ✓

Question **2**

Correct

Marked out of 5.00

Flag question

Objective

In this challenge, we're getting started with conditional statements.

Task

Given an integer, ***n***, perform the following conditional actions:

- If ***n*** is odd, print Weird
- If ***n*** is even and in the inclusive range of ***2*** to ***5***, print ***Not Weird***
- If ***n*** is even and in the inclusive range of ***6*** to ***20***, print ***Weird***
- If ***n*** is even and greater than ***20***, print ***Not Weird***

Complete the stub code provided in your editor to print whether or not ***n*** is weird.

Input Format

A single line containing a positive integer, ***n***.

Constraints

- $1 \leq n \leq 100$

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

Sample Input 1

Sample Output 1

Not Weird

Explanation

Sample Case 0: ***n = 3***

n is odd and odd numbers are weird, so we print ***Weird***.

Sample Case 1: ***n = 24***

n > 20 and ***n*** is even, so it isn't weird. Thus, we print ***Not Weird***.

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main()
{
    int n;
    scanf("%d",&n);
    if(n%2!=0)
    {
        printf("Weird");
    }
    if(n%2==0)
```

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main()
{
    int n;
    scanf("%d",&n);
    if(n%2!=0)
    {
        printf("Weird");
    }
    if(n%2==0)
    {
        if(n>=2 && n<=5)
        {
          printf("Not Weird");
        }

        if(n>=6 && n<=20)
        {
          printf("Weird");
        }
        else
        {
          if(n>20)
          {
            printf("Not Weird");
          }
        }
    }
}
```

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Question **3**

Correct

Marked out of 7.00

Flag question

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since 3*3 + 4*4 = 25 = 5*5 You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print 'yes', otherwise, print 'no'. Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no

Answer: (penalty regime: 0 %)

```
1
2  #include<stdio.h>
3  int main()
4  {
5      int a,b,c;
6      scanf("%d %d %d",&a,&b,&c);
7      if(a>b && a>c)
8      {
9        if(a*a==b*b+c*c)
10       {
11         printf("yes");
12       }
13       else
```

```
        {
            printf("no");
        }

    }
    if(b>a && b>c)
    {
        if(b*b==a*a+c*c)
        {
            printf("yes");
        }
        else
        {
            printf("no");
        }
    }
    else
    {
        if(c*c==a*a+b*b)
        {
            printf("yes");
        }
        else
        {
            printf("no");
        }
    }

}
```

	Input	Expected	Got

```
33          {
34              printf("yes");
35          }
36          else
37          {
38              printf("no");
39          }
40      }
41
42  }
```

	Input	Expected	Got	
✓	3 5 4	yes	yes	✓
✓	5 8 2	no	no	✓
